DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
3. Claims 1-3,5-8,10-12,14-19,21-23,25-31,33, and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Safarevich in U.S. Patent No. 6,061,595 in view of Swarts et al. in U.S. Patent No. 4,714,815. Safarevich discloses a method of making a medical device by laser welding an elongated shaft (element 48) to a helical coil (element 36) and then cooling but Safarevich uses a laser beam to create fusion bonds by melting both workpieces. Swarts et al. teach laser melting a first workpiece to cause it to melt and bond to a workpiece with a higher melting point. It would have been obvious to adapt Safarevich in view of Swarts et al. to provide this to create a mechanical bond without having to expend the necessary energy to melt the workpiece

(connector 52) with the higher melting point , thereby making the bonding process more energy efficient.

4. Applicant's arguments filed 11 July 2008 have been fully considered but they are not persuasive. Swarts et al. is not being relied upon for forming a medical device but for bonding two workpieces together. Since Safarevich already discloses a method of making a medical device with a weld (bond), Swarts et al. is analogous prior art to the field of bonding workpieces.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
